SKILLS

Languages & Frameworks: Python, SQL, Bash/Linux, FastAPI (REST APIs), Pandas, NumPy, Streamlit, Gradio

LLM / GenAI: RAG, LangChain, Hugging Face Transformers, vector databases (FAISS), embeddings, prompt engineering, quantization, agentic AI / AI agents, Model Context Protocol (MCP), LLM evaluation & benchmarking, NLP, Whisper, LLaVA

ML & Deep Learning: PyTorch, Scikit-learn, CNNs, Logistic Regression, Decision Trees, Random Forest

Tools & Platforms: Git, GitHub, Docker, Linux, VS Code, Jupyter, Google Colab, PyPI, pytest / TDD, Power BI, Excel

EDUCATION

Savitribai Phule Pune University

Nov 2022 – Aug 2026

Bachelor of Engineering in Computer Engineering • GPA: 7.02 • Pune, India

EXPERIENCE

Data Analyst Intern — Future Market Insights

Mar 2026 – Jun 2026

Pune, India

- Built Python web scrapers collecting 10,000+ records across 13 competitor sites, replacing manual data gathering for competitive-intelligence research.
- Co-built a Python + Claude API content pipeline that parsed Excel into structured JSON and generated SEO-optimized reports, flagging numeric errors via code checks and LLM source-verification.
- Engineered normalization and validation across 10,000+ parameters from inconsistent Excel files (varied layouts, missing fields, malformed values), producing clean, consistent JSON for report generation.

Project Dynamo — Handshake AI Fellowship

Jul 2026 – Present

Remote

- Authored 4 accepted Terminal-Bench-style evaluation tasks benchmarking frontier coding agents (GPT-5.4 / Terminus-2), each run and scored inside a Docker container via the Harbor CLI.
- Built deterministic pytest verifiers mapping every success criterion to an assertion on observable output artifacts, using seeded RNGs, pinned dependencies, and digest-pinned base images for reproducible scoring.
- Passed a 30-point adversarial QC gate on every submission by hardening tasks against degenerate, hardcoded, and reward-hijacking solutions (e.g. symlinked answer keys, ground truth recomputed from agent-writable inputs).

PROJECTS

Ultimate PDF PyPI Toolkit

Python, Typer, pypdf, PyPI

- Built a Python CLI toolkit that processes PDFs fully offline on the local machine, so sensitive documents never leave the user's computer.
- Implemented 6 PDF operations (merge, split, compress, rotate, encrypt/decrypt, metadata inspection) with per-page targeting and batch processing across all subcommands.
- Built test-first (TDD) with a pytest suite of 60+ unit tests (~10 per operation) covering malformed, encrypted, and multi-page PDF edge cases.

Groundwater Information Retrieval Chatbot (RAG Pipeline)

Python, LangChain, FAISS, Streamlit

- Designed a RAG pipeline with LangChain, Google AI Embeddings, and Groq Gemma-7B-It to answer technical questions about India's groundwater data.
- Indexed 30+ government documents (~500 pages) into a FAISS vector store for semantic search over dense technical content.
- Delivered combined retrieval + generation responses in 5–7 seconds through a Streamlit interface.

ACHIEVEMENTS

- Published a first-author peer-reviewed paper on deep learning-based forest fire detection covering model architectures, hardware backends, and cross-platform benchmarking (DOI: 10.56726/IRJMETs101154).
- Completed Anthropic's "Introduction to Model Context Protocol" certification, covering how MCP connects LLMs to external tools and data sources.
